1 M250 Exam Revision: Agenda

- Introductions
- Adobe Connect reminders
- Adobe Connect if you or I get cut off, wait till we reconnect (or send you an email)
- M250 Specimen Exam from 2021

- M250 Exam 2019 from Presentation 2018J
- Revision strategies and exam techniques

Introductions — **Phil**

- Name Phil Molyneux
- Background
 - Undergraduate: Physics and Maths (Sussex)
 - Postgraduate: Physics (Sussex), Operational Research (Brunel), Computer Science (University College, London)
 - Worked in Operational Research, Business IT, Web technologies, Functional Programming
- First programming languages Fortran, BASIC, Pascal
- Favourite Software
 - Haskell pure functional programming language
 - Text editors TextMate, Sublime Text previously Emacs
 - Word processing in MTEX all these slides and notes
 - Mac OS X
- Learning style I read the manual before using the software

Introductions — You

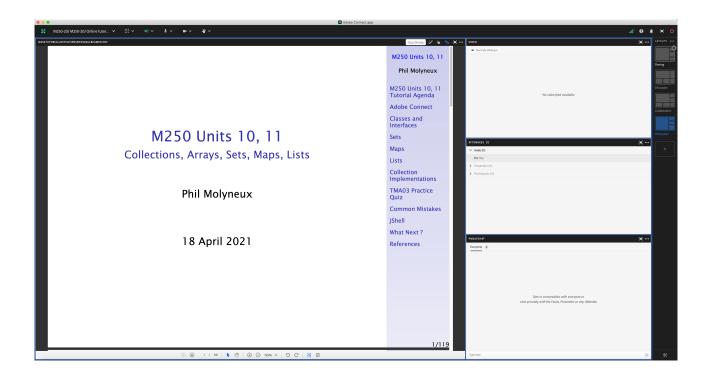

- Name?
- What other exams are you taking this year?
- Give one revision tip and exam tip to the group

ToC

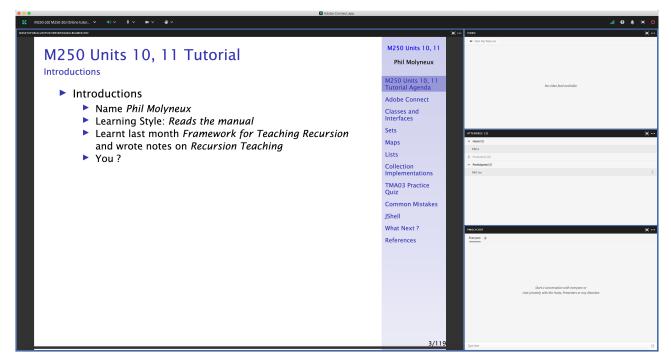

2 Adobe Connect Interface and Settings

2.1 Adobe Connect Interface

Adobe Connect Interface — Host View

Adobe Connect Interface — Participant View

2.2 Adobe Connect Settings

Adobe Connect — Settings

- Everybody Menu bar Meeting Speaker & Microphone Setup
- Menu bar Microphone Allow Participants to Use Microphone
- Check Participants see the entire slide including slide numbers bottom right Workaround
 - Disable Draw Share pod Menu bar Draw icon
 - Fit Width Share pod Bottom bar Fit Width icon

- Meeting Preferences General Host Cursor Show to all attendees
- Menu bar Video Enable Webcam for Participants
- Do not Enable single speaker mode
- Cancel hand tool
- Do not enable green pointer
- Recording Meeting Record Session ✓
- Documents Upload PDF with drag and drop to share pod
- Delete Meeting Manage Meeting Information Uploaded Content and check filename click on delete

Adobe Connect — Access

Tutor Access

```
TutorHome M269 Website Tutorials

Cluster Tutorials M269 Online tutorial room

Tutor Groups M269 Online tutor group room

Module-wide Tutorials M269 Online module-wide room
```

• Attendance

```
TutorHome Students View your tutorial timetables
```

- Beamer Slide Scaling 440% (422 x 563 mm)
- Clear Everyone's Status

```
Attendee Pod Menu Clear Everyone's Status
```

• Grant Access and send link via email

```
Meeting Manage Access & Entry Invite Participants...
```

• Presenter Only Area

```
Meeting Enable/Disable Presenter Only Area
```

Adobe Connect — **Keystroke Shortcuts**

- Keyboard shortcuts in Adobe Connect
- Toggle Mic # + M (Mac), Ctrl + M (Win) (On/Disconnect)
- Toggle Raise-Hand status # + E
- Close dialog box [5] (Mac), Esc (Win)
- End meeting # + \

2.3 Adobe Connect — Sharing Screen & Applications

- Share My Screen Application tab Terminal for Terminal
- Share menu Change View Zoom in for mismatch of screen size/resolution (Participants)

- (Presenter) Change to 75% and back to 100% (solves participants with smaller screen image overlap)
- Leave the application on the original display
- Beware blued hatched rectangles from other (hidden) windows or contextual menus
- Presenter screen pointer affects viewer display beware of moving the pointer away from the application
- First time: System Preferences Security & Privacy Privacy Accessibility

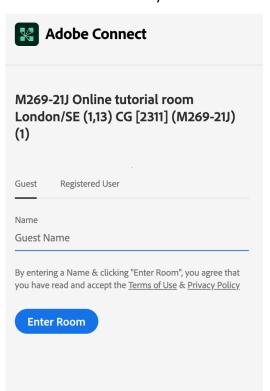

2.4 Adobe Connect — Ending a Meeting

- Notes for the tutor only
- Student: Meeting Exit Adobe Connect
- Tutor:
- Recording Meeting Stop Recording 🗸
- Remove Participants Meeting End Meeting... 🗸
 - Dialog box allows for message with default message:
 - The host has ended this meeting. Thank you for attending.
- Recording availability In course Web site for joining the room, click on the eye icon in the list of recordings under your recording edit description and name
- **Meeting Information** Meeting Manage Meeting Information can access a range of information in Web page.
- Delete File Upload Meeting Manage Meeting Information Uploaded Content tab select file(s) and click Delete
- Attendance Report see course Web site for joining room

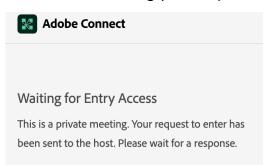

2.5 Adobe Connect — Invite Attendees

- Provide Meeting URL Menu Meeting Manage Access & Entry Invite Participants...
- Allow Access without Dialog Menu Meeting Manage Meeting Information provides new browser window with Meeting Information Tab bar Edit Information
- Check Anyone who has the URL for the meeting can enter the room
- Default Only registered users and accepted guests may enter the room
- Reverts to default next session but URL is fixed
- Guests have blue icon top, registered participants have yellow icon top same icon if URL is open
- See Start, attend, and manage Adobe Connect meetings and sessions
- Click on the link sent in email from the Host
- Get the following on a Web page

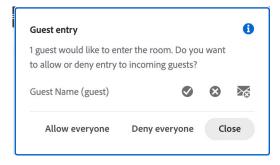

• As Guest enter your name and click on Enter Room

• See the Waiting for Entry Access for Host to give permission

• Host sees the following dialog in Adobe Connect and grants access

2.6 Layouts

- Creating new layouts example Sharing layout
- Menu Layouts Create New Layout... Create a New Layout dialog Create a new blank layout and name it PMolyMain
- New layout has no Pods but does have Layouts Bar open (see Layouts menu)

- Pods
- Menu Pods Share Add New Share and resize/position initial name is Share n rename PMolyShare
- Rename Pod Menu Pods Manage Pods... Manage Pods Select Rename Or Double-click & rename
- Add Video pod and resize/reposition
- Add Attendance pod and resize/reposition
- Add Chat pod rename it *PMolyChat* and resize/reposition
- Dimensions of **Sharing** layout (on 27-inch iMac)
 - Width of Video, Attendees, Chat column 14 cm
 - Height of Video pod 9 cm
 - Height of Attendees pod 12 cm
 - Height of Chat pod 8 cm
- **Duplicating Layouts** does *not* give new instances of the Pods and is probably not a good idea (apart from local use to avoid delay in reloading Pods)
- Auxiliary Layouts name PMolyAuxOn
 - Create new Share pod
 - Use existing Chat pod
 - Use same Video and Attendance pods

2.7 Chat Pods

- Format Chat text
- Chat Pod menu icon My Chat Color
- Choices: Red, Orange, Green, Brown, Purple, Pink, Blue, Black
- Note: Color reverts to Black if you switch layouts
- Chat Pod menu icon Show Timestamps

2.8 Graphics Conversion for Web

- Conversion of the screen snaps for the installation of Anaconda on 1 May 2020
- Using GraphicConverter 11
- File Convert & Modify Conversion Convert
- Select files to convert and destination folder

2.9 Adobe Connect Recordings

- Menu bar Meeting Preferences Video
- Aspect ratio Standard (4:3) (not Wide screen (16:9) default)
- Video quality Full HD (1080p not High default 480p)
- Recording Menu bar Meeting Record Session
- Export Recording
- Menu bar Meeting Manage Meeting Information
- New window Recordings check Tutorial Access Type button
- check Public check Allow viewers to download
- Download Recording
- New window Recordings check Tutorial Actions Download File

ToC

3 Specimen Exam for 2021 — Rubric

- Time limit 3 hours 30 minutes
- Answer all questions
- Part 1 4 Short Questions (25 marks)
- Part 2 A simple class (2 questions 15 marks)
- Part 3 Class relationships (2 questions 30 marks)
- Part 4 Collections (2 questions 30 marks)
- Note that the order of sub-questions varies from attempt to attempt so my slides may vary in presentation from the version you used

ToC

4 Spec 2021 Questions

4.1 M250 From 2021 Specimen 2021 Exam Q 1

 The following code does not compile. Why not? Select all the reasons that lead to compilation errors.

```
Public class Robot
{
    private int x;

public Robot()
{
    s = 1;
}

public getX()
{
    return x;
}
```

```
public void DecreaseX()
{
    X++;
}
```

- Select one or more:
- 1. The method DecreaseX does not follow naming conventions.
- 2. The constructor uses an undeclared variable.
- 3. The method getX should have an argument.
- 4. The method DecreaseX needs to decrement x.
- 5. The keyword this must be used to access the field x.
- 6. There is a brace (curly bracket) missing.
- 7. The constructor should declare a return type.
- 8. The method getX should declare a return type.
- 9. The code is not indented correctly.
- 10. The class header is not valid.
- 11. The instance variable x is not explicitly initialised.

Go to Soln 1

4.2 M250 From 2021 Specimen 2021 Exam Q 2

• Given the following declarations and initialisations, select the two correct options below.

```
String fish1 = "FISH";
     String fish2 = "FiSh".toUpperCase();
2
     String fish3 = fish1;
3
     String fish = "fish";
4
     System.out.println(fish1 == fish2);
                                                      / line 1
6
     System.out.println(fish1.equals(fish2));
                                                       line 2
7
     System.out.println(fish1 == fish3);
                                                    // 1ine 3
8
     System.out.println(fish == fish1);
                                                       line 4
10
     System.out.println(fish.equals(fish1));
                                                     // 1ine 5
```

- Select one or more:
- 1. The result of executing line 1 is true because fish1 and fish2 both reference strings consisting of the four characters F, I, S and H.
- 2. The result of executing line 2 is true because fish1 and fish2 both reference a string consisting of, in that order, the four characters F, I, S and H.
- 3. The result of executing line 3 is true because fish1 and fish3 both reference the same String object consisting of the four characters F, I, S and H.
- 4. The result of executing line 4 is true because fish and fish1 both reference the same string consisting of the four characters F, I, S and H.

5. The result of executing line 5 is true because fish and fish1 both reference the same string consisting of the four characters F, I, S and H.

Go to Soln 2

ToC

4.3 M250 From 2021 Specimen 2021 Exam Q 3

• Given the following class modelling a music CD, answer the four sets of questions about it.

```
class CD {
        private String artist ;
2
3
        private String title ;
        private int minutes ;
4
        public CD(String anArtist, String aTitle, int numMinutes) {
6
          artist = anArtist ;
          title = aTitle;
          minutes = numMinutes ;
10
        public String toString() {
12
                           ' + artist + "_Title:_" + title + "_Playing_time:_" + minutes ;
13
          return "Artist:_'
14
```

• Code continued:

```
public void hours() {
16
17
           if (minutes < 60) {</pre>
             System.out.println("Less_than_one_hour") ;
18
19
20
          else {
21
             int hrs ;
             hrs = minutes / 60;
22
             System.out.println("hours" + hrs);
23
24
          }
25
        }
26
      }
```

- 1 Match the following features to their correct names
- (a) public CD(String anArtist, String aTitle, int numMinutes)

```
(b) private String title;
```

- (c) minutes = 60
- (d) int hrs ;
- (e) /
- (f) anArtist

Choose		
expression method header local variable declaration literal	operand actual parameter constructor header field declaration	signature formal parameter operator

- 2 Which of the following features occur? (Tick the correct ones)
- (a) method chaining
- (b) multiple inheritance

(c) overloading
(d) overriding
(e) composition
(f) polymorphism

3 How many are there of each of the following? (Type in a digit, not a word)
(a) different operators (don't count repeats of the same operator)
(b) methods
(c) primitive type instance variables
(d) reference type instance variables

4 Which sets of variables have the same scope?

Select true if the variables have the same scope, otherwise select false.
(a) artist, title true/false
(b) artist, title, minutes true/false
(c) hrs, minutes true/false
(d) anArtist, aTitle, numMinutes true/false

Go to Soln 3

4.4 M250 From 2021 Specimen 2021 Exam Q 4

- Write a public method in the class Test that has the signature concatenateThese(int, int) and does not return any value.
- The method concatenates all of the elements between the given indexes of the nums array into a single string and prints that string out (see the example below).
- You do not have to perform any checks on the parameters to see whether they are in bounds for the array.
- For example

```
Test Result
Test t = new Test(new int[]{1,3,7,9,10}); 7910
t.concatenateThese(2,4);
```

Complete your code in the following:

```
public class Test {
    private int[] nums;
    public Test(int[] vals) {
        nums = vals;
    }
    // Write your concatenateThese(int, int) method here
}
```

Go to Soln 4

4.5 M250 From 2021 Specimen 2021 Exam Q 5

- **Scenario** This question concerns a class called House which is to be developed to model some aspects of a house.
- Write a class to complete the requirements in (a)-(g) below:
- (a) The class is to be called House.
- (b) The class requires two private instance variables called material of type String, and age of type int.
- (c) Add a public constructor to the class that takes two parameters. The first parameter is of type String and the second parameter is of type int. Use the first parameter to set the material field, and the second parameter to set the age field.
- (d) Write standard getter methods for the two fields.
- (e) Write standard setter methods for the two fields.
- (f) Write a public method called about that returns a string of the following form:

A material house of age age

- The *material* and *age* should be replaced by the actual material and age of the house.
- (g) Write a public method with the signature equals (House) that returns true if the fields of the actual parameter have the same values as the fields of this object, and returns false otherwise.
 - Below is an example test case for this class.
 - For example

Test Result
House a = new House("brick", 23); brick
System.out.println(a.getMaterial());

Complete your code in the following:

// write your answer here

Go to Soln 5

4.6 M250 From 2021 Specimen 2021 Exam Q 6

- Based on the House class just described, select the correct answers below:
- (a) The class overrides 0,1,2,... method(s).
- (b) The class overloads 0,1,2,... method(s).
- (c) The class is not/is a subclass of Object.
- (d) The class does not demonstrate/demonstrates information hiding.
- (e) The class needs to/does not need to use at least one external method call.

Go to Soln 6

4.7 M250 From 2021 Specimen 2021 Exam Q 7

- Scenario This question concerns a class called Child which is to be developed as a subclass of the class Person (click to view this file), which has already been developed.
- Persons have a first name, a last name, wear white shirts by default, have a number of friends, and have an amount of money.
- Children may be in a playing state, or not playing.
- The Java library class java.awt.Color is used to represent shirt colours such as Color.WHITE.
- Note that printing out a colour produces output such as java.awt.Color[r=0,g=0,b=255] (which represents Color.BLUE in this case). The three numbers represent components of Red, Green, and Blue colour.
- Develop only the class Child
- (a) Add the class Child below, making it a subclass of Person.
- (b) Add a private instance variable to the class called playing of type boolean.
- (c) Add a public constructor for Child whose first parameter is the child's first name and whose second parameter is the child's second name.
 - The constructor should initialise the child's first and last names using the received arguments.
 - The instance variable playing should be set to true. The initial money should be set to 10.
- (d) Add a standard getter method for playing called isPlaying.
- (e) Add a public method play, which takes no arguments and returns no value.
 - The method sets playing to true and increments the child's number of friends by 1.
- (f) Add a public method work, which takes no arguments and returns no value.
 - The method sets sets playing to false and and decrements the child's number of friends by 1.
 - (Don't worry about the value becoming negative.)
- (g) Add a public method getNickname that returns a nickname for the child based on their first and last names at the time the method is called.
 - The method returns the first three letters of the child's first name concatenated to the last three letters of the child's last name in lowercase.
 - (You can assume the names are long enough.)
 - For example, if the child's first name is "Betsy" and their last name is "Corble" the method will return the string "Betble".

(h) Add a public method buySnack which does not return a value and has a single parameter of type int representing the cost of a snack.

If the child has enough money to buy the snack then the method decreases the money the child owns by the argument received, otherwise it just prints

I need money

(i) Add a public method goHome which does not return a value and takes no arguments.

If the child has no friends then the method prints

I'm going home

Otherwise the method prints

Bye

as many times as the child has friends.

(i) Add a public setShirtColour method to override the inherited method of that name.

The child's method behaves in the same way as the inherited method provided that the child is not playing.

When a child is playing, its setShirtColour method behaves as follows:

If the child is wearing a shirt that is Color. WHITE then the method prints

I'm changing now

before setting the child's shirt colour to the received argument.

If the child is not wearing a shirt that is Color. WHITE then the method prints

I'm wearing play clothes already

but doesn't change the shirt colour.

- Below is an example test case for this class.
- For example

Test	Result
Child f = new Child("Jan", "Feb");	1
<pre>System.out.println(f.getNumFriends());</pre>	false
f.work();	0
System.out.println(f.isPlaying());	
System.out.println(f.getNumFriends());	

Go to Soln 7

4.8 M250 From 2021 Specimen 2021 Exam Q 8

- Answer parts (a)-(d) below.
- (a) Consider the following code based on the person and child scenario and the code developed in this question.

Select all of the following statements that will compile.

```
(i) Child c = new Child("Celia", "Goth");
(ii) Person p = new Child("Penny", "Bun");
(iii) Person p = new Person("Kim", "Wilde");
(iv) Person p = new Object("Janet", "Becker");
(v) Person p = new Child("Penny");
(vi) Child c = new Person("Tom", "Sawyer");
(b) Suppose that the following further code is added to the class Child
```

Select all of the true statements in this scenario:

return (playing ? "not_playing" : "playing") ;

public String playingString() {

- (i) The playingString method contains a logical error.
- (ii) The playingString method overloads the toString method in the Object class.
- (iii) The playingString method will not compile because it contains a syntax error.
- (iv) The playingString method overloads the toString method in the Person class.
- (v) The playingString method will not compile because it is missing the @Override annotation.
- (vi) The playingString method will cause an exception.

ToC

4.9 M250 From 2021 Specimen 2021 Exam Q 9

• Scenario A concert hall hosts musical concerts.

A concert has a programme of musical performances.

Each item of music in a programme has a title and a composer.

- The class Music (click to view this file) has already been developed.
- Please note that the answer box below contains two classes to complete.

You can only use import statements at the top of the answer box.

- The answer box below includes some methods of the class Concert that you should not alter, as well as a wrapper for the ConcertHall class.
- (a) Develop only the class Concert in this part.
- (i) Add a declaration for a private instance variable called programme, which should be declared as a List containing elements of type Music.
- (ii) Add a public constructor for Concert that takes two string parameters representing the date of the concert and the concert name, and initialises the related variables accordingly.

The constructor should also initialise programme to a suitable empty collection.

(iii) Add a standard getter method for the programme collection.

- (iv) Write a public instance method getConcertLength that takes no parameters and returns the length of the concert in minutes.
 - The method will need to loop through the Music items in programme, and add up all their performance times then return the total.
- (v) Write a public instance method addProgrammeItem that takes an argument of type Music and returns no value.

If the running time of the concert will not exceed MAX_LENGTH by adding the music to the programme list then it is added, otherwise the error message

Running time exceeded

is printed instead.

(vi) The concert hall owners want to be able to sort concerts by their concertName.

Modify the Concert class so that it implements the appropriate interface, and then implement the compareTo method that will allow the ordering required.

- (b) Develop only the class ConcertHall in this part.
- (i) Add a *public* instance variable whatsOn to the ConcertHall class that will be used to map between sorted composers' names and sorted sets of names of their music that are performed in a concert.

(For example, when populated the map might include a mapping from the name "Elgar" to a sorted set of Elgar's music including "Engima Variations" and "Sospiri".)

Note that this field needs to be made public for testing purposes.

- (ii) Add a public ConcertHall constructor that initialises whatsOn to a suitable collection type (initially empty).
- (iii) Add a public instance method addConcert that takes a parameter of type Concert and does not return a value.

This method's job is to populate the whatsOn map according to the contents of the concert.

Remember that a Concert has a programme of music.

When the addConcert method is finished running the whatsOn map should contain a mapping for each composer whose music is in the concert programme, with the value being the sorted set of the composer's music in the programme.

• Below is an example test case for this class.

• For example

Test //check constructor executes and initialisation 2021-12-20
Concert c = new Concert("2021-12-20", "Happy days"); Happy Days
System.out.println(c.getDate()); []
System.out.println(c.getConcertName());
System.out.println(c.getProgramme());

Go to Soln 9

4.10 M250 From 2021 Specimen 2021 Exam Q 10

- Thinking about the scenario of the concert hall in the previous question:
- (a) Select **two** reasons why it is preferable to declare the whatsOn collection using an interface type, such as a Map, rather than a concrete class such as HashMap, which implements that interface.
- (i) A HashMap is abstract while a Map is concrete.
- (ii) A Map provides more opportunity for reuse, due to substitutability of subtypes.
- (iii) Using a Map allows us to change the implementation type more easily later on.
- (iv) A Map supports multiple inheritance while a HashMap does not.
- (v) A Map is more efficient than a HashMap.
- (b) Select **two** reasons why a set is appropriate for the values in the whatsOn map, while a *list* was chosen for the programme in the Concert class:
- (i) Titles of music by a composer are unique, so a set is appropriate for storing them.
- (ii) A set is more efficient for storing music titles associated with a composer than a list.
- (iii) A set maintains the order of items added to it so is best for a music programme.
- (iv) A concert hall has a set of music, so composition with sets and lists is appropriate.
- (v) A programme of music has a particular playing order, so a list is appropriate for the programme.

5.8 M250 From 2021 Specimen 2021 Exam Soln 8

(a) Consider the following code based on the person and child scenario and the code developed in this question.

Select all of the following statements that will compile.

```
(i) Child c = new Child("Celia", "Goth"); yes
(ii) Person p = new Child("Penny", "Bun"); yes
(iii) Person p = new Person("Kim", "Wilde"); yes
(iv) Person p = new Object("Janet", "Becker");
(v) Person p = new Child("Penny");
(vi) Child c = new Person("Tom", "Sawyer");
```

(b) Suppose that the following further code is added to the class Child

```
public String playingString() {
   return (playing ? "not_playing" : "playing") ;
}
```

Select all of the true statements in this scenario:

- (i) The playingString method contains a logical error. yes
- (ii) The playingString method overloads the toString method in the Object class.
- (iii) The playingString method will not compile because it contains a syntax error.
- (iv) The playingString method overloads the toString method in the Person class.
- (v) The playingString method will not compile because it is missing the @Override annotation.
- (vi) The playingString method will cause an exception.

104
           for (Music progItem : aProgramme) {
105
             if (this.whatsOn.containsKey(progItem.getComposer())) {
106
               ts = this.whatsOn.get(progItem.getComposer()) ;
107
108
             } else {
               ts = new TreeSet<String>() ;
109
               this.whatsOn.put(progItem.getComposer(),ts);
110
111
112
             ts.add(progItem.getTitle());
           }
113
         }
114
116
       }
```

• Errors in the development of the answer

- (1) Wrong bracket in method calls) not (
- (2) Forgot import java.util.*
- (3) getConcertLength() got programme from wrong place
- (4) Forgot implements clause
- (5) Problem with compareTo()
- (6) implements Comparable should have been implements Comparable Concert>
- (7) Did not expect @Override

Go to Q 9

5.10 M250 From 2021 Specimen 2021 Exam Soln 10

- (a) Select **two** reasons why it is preferable to declare the whatsOn collection using an interface type, such as a Map, rather than a concrete class such as HashMap, which implements that interface.
- (i) A HashMap is abstract while a Map is concrete.
- (ii) A Map provides more opportunity for reuse, due to substitutability of subtypes. yes
- (iii) Using a Map allows us to change the implementation type more easily later on. yes
- (iv) A Map supports multiple inheritance while a HashMap does not.
- (v) A Map is more efficient than a HashMap.
- (b) Select **two** reasons why a set is appropriate for the values in the whats0n map, while a *list* was chosen for the programme in the Concert class:
- (i) Titles of music by a composer are unique, so a set is appropriate for storing them. yes

- (ii) A set is more efficient for storing music titles associated with a composer than a list.
- (iii) A set maintains the order of items added to it so is best for a music programme.
- (iv) A concert hall has a set of music, so composition with sets and lists is appropriate.
- (v) A programme of music has a particular playing order, so a list is appropriate for the programme. yes

6 Prsntn 2018J Qs

6.1 M250 2018J Exam Qs

- M250 Object-oriented Java Programming
- Presentation 2018J Exam
- Date Monday, 10 June 2019 Time 10:00-13:00
- You should attempt ALL questions
- **Note** see the original exam paper for exact wording and formatting these slides and notes may change some wording and formatting

Go to Solns

6.2 M250 2018J Exam Q 1

- **Scenario** Equity is a union of more than 43000 performers. All performers in Equity have a professional name, known as their *equity name* which is unique to them, and can choose to join a local branch of Equity.
- Performers can belong to a local branch which organises regular meetings, for example on the second Saturday of each month.
- This question asks you to write parts of the class Performer, whose purpose is to model this scenario.
- Assume a class Branch which has two private String instance variables, name, address, a two-argument constructor allowing the branch name and address to be initialised, an equals method, getter methods for name and address and a setter method for address.

6.2.1 Q 1(a)

(a)(i) Write a class Performer with the following:

(9 marks)

- a private instance variable of type String called equityName
- a private instance variable of type double called payRate, which will be used to hold the agreed rate of pay for that performer

• a private instance variable of type Branch called branch which will refer to the instance of Branch which that performer has joined

- a public class variable of type double called minPayRate which is the minimum pay rate agreed by Equity for performers.
- a public single-argument constructor which initializes equityName to the argument string aName, sets branch to null and sets payRate to minPayRate
- a public setter method for payRate
- a public getter method for branch
- a public setter method for branch
- a public getter method for equityName
- (ii) Write a public instance method isInSameBranchAs() that has a Performer argument.
 - This method will return true if the receiver and the argument Performer objects are members of the same branch, and false otherwise. (5 marks)
- (iii) Write a public instance method getFirstName() that has no arguments.
 - This method will return a String consisting of all the characters in the equityName, up to but not including the first space. You may assume that there is a space in the equityName.
 (5 marks)

6.2.2 Q 1(b)

(b) Given the code developed in part (a), assume that the following code is part of a method and is executed:

```
Branch b1;
b1 = new Branch("Kent", "The_Alexander_Centre"); // 2
Branch b2;
b2 = new Branch("Dorset", "Wessex_fm_Studios"); // 4
Performer.minPayRate = 9.50;
Performer p1 = new Performer("Happy_Bunny"); // 6
Performer p2 = new Performer("Silly_Sausage"); // 7
p1.setPayRate(10.00); // 8
p2.setPayRate(20.00); // 9
p1.setBranch(b1); // 10
p2.setBranch(b1); // 11
System.out.println(p1.isInSameBranchAs(p2)); // 12
```

- In the numbered lines of code above, identify all the examples of the following, stating the line number(s) on which they occur. If there are no examples, state *None* explicitly.
 (7 marks)
- (i) messages are sent
- (ii) reference variables are declared
- (iii) primitive variables are declared
- (iv) object construction
- (v) operators are used
- (vi) formal arguments are declared

(vii) actual arguments are used

6.2.3 Q 1(c)

- (c) For the class Performer, write the public instance method equals() that overrides the equals() method inherited from Object.
 - This method will return true if the equityName of the receiver is the same as the equityName of the argument object, and otherwise return false. (5 marks)

6.2.4 Q 1(d)

- (d) Based on the Performer class written so far, answer the following questions:
- (i) What is the nature of the object-oriented relationship between the classes Performer and Branch? Explain your answer. (2 marks)
- (ii) Consider line // 5 in part (b) above. Why can the value of minPayRate be set at this point when no Performer objects have been constructed? (2 marks)
- (iii) Give two examples of how scope applies to the Performer class. One example should relate to an instance variable and the other should relate to a formal argument. (5 marks)

Total (40 marks)

Go to Soln 1

6.3 M250 2018J Exam Q 2

6.3.1 Q 2(a)

- **Scenario** This question concerns a number of vehicle classes and the **Drivable** interface that specifies some common behaviours.
- (a) Drivable is a Java interface that specifies three methods accelerate(), brake() and stop().

These methods take no argument and return no value.

Write down the Drivable interface.

(3 marks)

6.3.2 A 2(b)

- (b) In this part of the question you will develop code for the Vehicle class. The class Vehicle inherits directly from Object and implements the Drivable interface.
- (i) Write down the header for the Vehicle class.

(1 mark)

(ii) Suppose Vehicle has a single private instance variable speed of type int. Vehicle implements the methods of the Drivable interface according to the following rules.

- accelerate() causes speed to be increased by 1.
- brake() causes speed to be decreased by 1, as long as it is greater than 0, otherwise it leaves it unchanged.
- stop() causes speed to be repeatedly decreased by 1 until it reaches 0.
- Write the code for these three methods.

(5 marks)

ToC

6.3.3 Q 2(c)

(c) In this part of the question you will develop code for the Car class. The class Car is a subclass of Vehicle.

Car has two extra int instance variables maxSpeed and increment. (7 marks)

(i) When an instance of Car receives the message accelerate(), it increases its speed by increment if that would not take the speed over maxSpeed, otherwise speed is left unchanged.

Write the accelerate() method for Car.

- (ii) What is the benefit of adding the @Override annotation to the accelerate() method for Car?
- (iii) Suppose that we want to keep a count of the number of Car objects that have been created. Explain using code fragments how we could achieve this.

ToC

6.3.4 Q 2(d)

- (d) Suppose that a class called SpeedBoat, which is unrelated to Car, also implements the Drivable interface, and that a class called Service has a public constructor that takes a formal argument of type Drivable. (4 marks)
- (i) Briefly explain why lines //1 and //2 below are valid:

```
Car c = new Car();
SpeedBoat sb = new SpeedBoat();
Service s1 = new Service(c); //1
Service s2 = new Service(sb); //2
```

(iii) Suppose that we want to keep a count of the number of Car objects that have been created. Explain using code fragments how we could achieve this.

ToC

6.3.5 Q 2(e)(f)

- (e) Describe three differences between abstract classes and interfaces. (6 marks)
- (f) Suppose that SportsCar is a subclass of Car. Describe what needs to be added to the class SportsCar (if anything) so that SportsCar will implement the interface Drivable. Briefly justify your answer. (4 marks)

Total (30 marks)

Go to Soln 2

6.4 M250 2018J Exam Q 3

- **Scenario** Caravan owners who belong to a club make bookings in advance for their stays on various sites, giving their estimated time of arrival for each stay on a site.
 - The club wants to look at the pattern of estimated arrival times for all their caravan sites for a particular weekend so that they can organise staffing appropriately.
 - Two classes, Booking and CaravanSite, have already been partially completed.
- The class Booking already has the following instance variables, constructor and getters:
- A private instance variable makeAndModel of type String which represents the make and model of the caravan e.g. "Swift Basecamp",
- A private instance variable owner of type String, which represents an owner name e.g. "Sue Smith",
- A private instance variable estArrivalHour of type int, which represents the estimated arrival hour as a whole number using the 24-hour clock (e.g. 16 is used to represent 4pm),
- A three-argument constructor that takes arguments of types String, String and int and uses them to set the instance variables,
- Getter methods for makeAndModel, owner and estArrivalHour.
- The class CaravanSite already has the following instance variables:
- A private instance variable siteName of type String, which represents the unique name of the caravan site (e.g. "Park Coppice"),
- A private instance variable maxVans of type int, which represents the maximum number of caravans that can be accommodated on that site.

6.4.1 Q 3(a)

- (a) In this part of the question you will develop additional code for the CaravanSite class.
- (i) Write down the declaration of a private instance variable called bookings, which should be declared as a List of Booking elements, representing bookings currently made for the site, in the order the bookings were made. (1 mark)
- (ii) Write a two-argument constructor for CaravanSite that takes a String argument representing the name of the caravan site, and an int representing the maximum number of caravans that can be accommodated, and initialises the instance variables accordingly. The constructor should also initialise bookings with a suitable empty collection.

 (3 marks)
- (iii) Write a public instance method addBooking() that takes a Booking argument representing the booking of a caravan.

As long as the number of bookings already made is less than the maximum number of caravans the site can accommodate, the Booking is added to bookings.

If there is not enough room then a suitable message is printed.

In both cases the remaining number of vans that can still be accommodated after this booking is returned. (4 marks)

6.4.2 Q 3(b)

- (b) In this part of the question you will develop extra code for the Booking class so that instances of Booking may be sorted from earliest to latest estimated arrival hour.
 - Assume the equals() and hashCode() methods for Booking have already been written.
- (i) Write down the new class header for Booking, which must now implement an appropriate interface. (1 mark)
- (ii) Write a compareTo(Booking) method for Booking that will allow ordering of Booking instances as above. (3 marks)

6.4.3 Q 3(c)

(c) Write a public instance method orderBookings() for the CaravanSite class that takes no argument and returns no value.

This method should reorder the elements of bookings by estimated arrival hour.

(2 marks)

6.4.4 Q 3(d)

(d) In this part of the question you will develop code for a further class, CaravanClub. This class will help to determine the pattern of estimated arrival times across all caravan sites.

The class CaravanClub requires a single private instance variable arrByTime. This is a map where the key is a particular estimated arrival hour as a whole number (e.g. 16) and the value is an **unordered set** of Booking with that arrival time, from all caravan sites.

- (i) Write down the declaration of a private instance variable arrByTime of a suitable interface type to reference the map described above. (2 marks)
- (ii) Write a zero argument constructor that initialises arrByTime to a suitable collection. (2 marks)
- (iii) Write the public instance method addSite(). This method takes a CaravanSite instance as the argument and has no return value. The method adds each of the bookings for that particular site to the arrByTime map, according to the bookings' estimated arrival hours.

Assume that the class CaravanSite has a public instance method getBookings() that returns a list of the bookings for that site.

Note that you cannot assume that a particular estimated arrival hour exists as a key in the map. (8 marks)

6.4.5 Q 3(e)

- (e)(i) Why is it preferable to declare a collection variable in terms of an interface type, such as List, rather than a concrete class, such as ArrayList, which implements that interface? Explain your answer, making two points. (2 marks)
 - (ii) Give **two** ways in which an ArrayList is different from an array. (2 marks)

Total (30 marks)

7 Prsntn 2018J Solns

7.1 M250 2018J Exam Solns

- The solutions given below are not official solutions
- For some questions, alternatives are given a student would only have to provide one
- No marks are given for code comments
- You may assume any import statements required, unless otherwise indicated.
- You may assume that methods receive sensible values when a message is sent, unless otherwise indicated.
- When writing code, you will not be penalised for minor errors, as long as the meaning is clear.

Go to Qs

7.2 M250 2018J Exam Soln 1

7.2.1 Soln 1(a)

(a)(i) **Q** 1

```
public class Performer {
    private String equityName ;
    private double payRate ;
    private Branch branch ;
    public static double minPayRate ;

public Performer(String aName) {
    super() ;
    equityName = aName ;
```

```
branch = null;
payRate = Performer.minPayRate;

/* or */
// payRate = minPayRate;

}
```

```
public void setPayRate(double aPayRate) {
         payRate = aPayRate ;
3
        public Branch getBranch() {
6
         return branch;
       public void setBranch(Branch aBranch) {
10
         branch = aBranch ;
       }
11
13
       public String getEquityName() {
         return equityName ;
14
15
```

(ii)

```
public boolean isInSameBranchAs(Performer p) {
    return branch.equals(p.getBranch());
    /* or */
    // return getBranch().equals(p.getBranch());
}
```

(iii)

```
public String getFirstName() {
   int spaceIndex = equityName.indexOf("_");
   /* or */
   // int spaceIndex = equityName.indexOf(' ');
   return equityName.substring(0,spaceIndex);
}
```

ToC

7.2.2 Soln 1(b)

(b)

- (i) messages are sent: lines 8,9,10,11,12
- (ii) reference variables are declared: lines 1,3,6,7
- (iii) primitive variables are declared: None
- (iv) object construction: lines 2,4,6,7
- (v) operators are used: 2,4,6,7
- (vi) formal arguments are declared: None
- (vii) actual arguments are used: 2,4,6,7,8,9,10,11,12

Go to Q1

7.2.3 Soln 1(c)

(c)

```
00verride
public boolean equals(Object obj) {
    Performer pfmr = (Performer) obj ;
    return equityName.equals(pfmr.equityName) ;
}
```

- This version assumes that the object is of type Performer
- See below for a more robust version
- (c) Alternative, more robust version

```
@Override
public boolean equals(Object obj) {
    if (obj == this) {
        return true ;
    }
    if (!(obj instanceof Performer)) {
        return false ;
    }
    Performer pfmr = (Performer) obj ;
    return equityName.equals(pfmr.equityName) ;
}
```

• It is recommended to override hashcode() if you are overriding equals()

ToC

7.2.4 Soln 1(d)

(d)

- (i) A Performer object has a Branch object composition not inheritance
- (ii) minPayRate can be set since it is a class (static) variable and hence already exists with the class Performer definition.
- (iii) The scope of a class member such as an instance variable is the entire class (except where shadowed by another declaration with the same name there is none here).

The scope of a formal parameter is the body of the method

Go to Q 1

7.3 M250 2018J Exam Soln 2

7.3.1 Soln 2(a)

(a) **Q** 2

```
public interface Drivable {
   void accelerate();
   void brake();
   void stop();
}
```

• The method description modifiers of abstract and public are implicit

7.3.2 Soln 2(b)

(b)

```
public class Vehicle implements Drivable {
   private int speed;

public Vehicle() {
   super();
   speed = 0;
}

public void accelerate() {
   speed = speed + 1;
}

// } // continued below
```

```
public void brake() {
          if (speed > 0) {
3
            speed = speed - 1;
5
        public void stop() {
          while (speed > 0) {
8
 9
            speed = speed - 1;
10
11
        public int getSpeed() {// required later
13
          return speed ;
15
17
        public void setSpeed(int spd) {// required later
          speed = spd ;
18
19
20
      }
```

ToC

7.3.3 Soln 2(c)

(c)

```
public class Car extends Vehicle {
        private int maxSpeed ;
        private int increment ;
        public static int count = 0 ; // Q2(c)(iii)
        public Car() {
          super();
          Car.count = Car.count + 1; // Q2(c)(iii)
8
9
        @Override
11
12
        public void accelerate() {
          if ((getSpeed() + increment) <= maxSpeed) {</pre>
13
14
            super.setSpeed(super.getSpeed() + increment) ;
15
        }
16
      }
17
```

(c)

- (ii) @Override gets the Java compiler to check that the method signature is correct see Unit 6, page 15
- (iii) See comments on code above

7.3.4 Soln 2(d)

- (d) Q2
- (i) Both Car and SpeedBoat implement the interface Drivable and the Service constructor takes an argument of type Drivable
- (ii) Actual methods will depend on the class of object at runtime

ToC

7.3.5 Soln 2(e)

(e)

- Only one abstract class can be inherited but a class may implement more than one interface
- Abstract classes can declare instance variables but interface can not
- Up to Java 8, interfaces could not declare default methods

7.3.6 Soln 2(f)

(f)

Nothing is required since SportsCar will inherit the interface fields from Car

```

ToC

7.4.5 Soln 3(e)

- (e) **Q** 3
- (i) The interface is the real type of the variable, parameter, method of other field and should be used instead of the implementation class this enables flexibility and maintainability

See page 76 of Unit 10 Sets and Maps and Bloch (2017, Item 64, page 280)

(ii) ArrayList is expandable unlike Array — it implements the List interface which has different fields and methods to Array

See Bloch (2017, Item 28, page 126)

Go to Q3

8 What Next?

Programming, Debugging, Psychology

Although programming techniques have improved immensely since the early days, the process of finding and correcting errors in programming — known graphically if inelegantly as *debugging* — still remains a most difficult, confused and unsatisfactory operation. The chief impact of this state of affairs is psychological. Although we are happy to pay lip-service to the adage that to err is human, most of us like to make a small private reservation about our own performance on special occasions when we really try. It

is somewhat deflating to be shown publicly and incontrovertibly by a machine that even when we do try, we in fact make just as many mistakes as other people. If your pride cannot recover from this blow, you will never make a programmer.

Christopher Strachey, Scientific American 1966 vol 215 (3) September pp112-124

- To err is human, to really foul things up requires a computer.
- Attributed to Paul R. Ehrlich in 101 Great Programming Quotes
- Attributed to Bill Vaughn in Quote Investigator
- Derived from Alexander Pope (1711, An Essay on Criticism)
- To Err is Humane; to Forgive, Divine
- This also contains

A little learning is a dangerous thing;

Drink deep, or taste not the Pierian Spring

• In programming, this means you have to read the fabulous manual (RTFM)
